*Gynaecologist & Infertility Specialist,
Care IVF*

ABOUT CARE IVF

If your own fertility and that of your partner is normal there will be roughly a 25% chance of becoming pregnant as a result of unprotected intercourse during the fertile period of each cycle. With months of trying it is expected that about 85% couples will achieve a pregnancy by the end of the first year. You and your partner have tried for months, perhaps for even more than a year. But despite sexual intercourse without birth control, you've been unable to conceive a child. This is not helped by the apparent ease that others around you

seem to have in conceiving; your sister having her second baby, your friend having a termination of pregnancy, babies in ads and all over TV - everyone is having a baby except you - even people who don't want one!

If you've been trying to conceive for more than a year, there's a good chance that something may be interfering with your reproductive function. Infertility, also known as subfertility, is the inability to conceive a child within one year of unprotected intercourse. Infertility may be due to a single cause in either

you or your partner, or a combination of factors that may prevent a pregnancy from occurring or continuing. It affects about 15% of couples.

At Care IVF we constantly try to make sure that you achieve your dream of having a child of your own with the minimum of fuss and the maximum of comfort. Our aesthetically designed new facilities offer the best in patient care and technological advancement. Our team is trained offered support, every step of the way so that your journey to parenthood is pleasant and memorable.

“ At Care IVF, our motto is Expertise, Honesty & Compassion. With these principles in mind we have served our patients for the last 10 years & will continue to do so. Our strength lies in our success stories & in the continued love, affection & support we have received from our patients & referring doctors. ”

Our state-of-the-art lab & equipment gives us an edge over most other IVF centres in the region

Embryology team is always the backbone of an IVF centre and requires both precision and extreme dedication. The team Care IVF is headed by **Saroj Agarwal** (MSc Gold Medalist), assisted by **Subhankar Dutta** (Msc Medical Microbiology) and **Animesh Bera** (DMLT). They have been fortunate to be trained by the best of the Embryologists in India and Abroad.

TREATMENT OPTIONS @ CARE IVF

The treatment at Care IVF is always a step up process which is tailor made for your needs. This involves careful consideration of your specific medical needs as well as factors like your age and economic constraints.

- Ovulation Induction
- IVF & ICSI
- Laser Hatching
- PGS and PGD
- Egg, Sperm & Embryo Donation
- Egg Sharing
- Egg & Sperm Freezing
- Surrogacy

CARE @ CARE IVF

What To Expect When You Start Treatment?

The world of Infertility is still a world partly explored. We are discovering yet new ways to investigate and treat patients. While the emphasis is obviously on delivering you 'a bundle of joy' it is also important that the means to achieve that must not be taxing to your mind, body or your pocket. From the time you step into our clinic, your treatment will follow a pattern that is set by international guidelines yet modified by our experience to suit each case. It is vital that you get the right advice about the most appropriate treatment for your specific problem and in our care; you will be guided towards the option that is best for your condition, age and circumstances. At Care IVF we always encourage you to ask "Why?" so feel free to ask any questions regarding your investigations and treatment. We encourage you to jot down all your queries and fire them at our Consultants during discussions.

"The process of finding a solution to your problems must not be more painful than your problem itself." This is the motto with which Care IVF was born and over the years we have focused not only on the best treatment for you but also to make your life a little more comfortable while you undergo the treatment".

INTERNATIONAL PATIENTS

Each year patients come to CARE IVF from around the world for specialized medical care which is not available close at their home country. Since numbers of international patients are increasing, we have started our international patient assistance department. Patients looking for fertility treatment can contact us for doctor appointment and scheduling of treatment program. We also provide travel assistance and accommodation. We also provide Skype consults so that patients can save on their valuable time and money.

LEAF FOUNDATION

Mission

Its mission is to provide compassionate and informed help to people experiencing the crisis of infertility; and to increase visibility about infertility issues by public education. LEAF's goals include: providing in-depth, reliable medical information which encourages people to make informed decisions on options and treatment; encouraging patient self-education resulting in a stronger doctor-patient relationship; and offering emotional support services to reduce anxiety and help restore feelings of control, self-worth and optimism.

Objectives

- To provide fact sheets on every

aspect of fertility and infertility to educate the patient so that the couple is aware on the 'why' and 'how' of treatment.

- To create support groups for patient interactions. This helps generate a feeling of "I am not alone" and allows patients to counsel other patients. Infertile couples are socially isolated and emotionally very vulnerable. They need a place where they can get together and talk to people in the same boat as themselves, to help them tide over this crisis in their life.
- To arrange Care Evenings where patients are exposed to eminent Infertility experts and also former patients who provide information, share experiences and also answer

queries regarding the various treatments. This also gives an opportunity to meet the staff at Care IVF and tour the facilities.

- To identify needy patients and provide financial support so that at least the mentally traumatised couple is not financially exhausted either.
- To organise free camps where the primary problem of the patient can be addressed and the patient can be given an idea about the costs involved.
- To promote Infertility Prevention so as to 'nip the disease in the bud'. To set up a patient education library which would have books, videos and brochures which would help people educate themselves on infertility.

TEAM CARE IVF

Dr Rajeev Agarwal
Director & Infertility
Specialist
